implementation fee
(pay just \$2000
instead of \$4000!)

Benefits for Faculty, Students, and Staff

The Ares system automates library reserve services, provides around-the-clock access to reserves collections, includes integrated copyright management services, and saves time for faculty members and library staff.

"Ares has caused a culture change in the way the library is perceived. People who hadn't used the library are now walking in and expecting to post reserve items themselves."

Facilitates copyright management. Ares provides easy, flexible ways to manage, track, and pay copyright. Ares is the only reserve system integrated with the Copyright Clearance Center's Annual Copyright License.

Increases staff productivity. Ease with which faculty can upload their own reserves frees up reserve staff time. Reserves staff can post System Alerts to keep faculty and students updated on information, deadlines, closings, and/or other events.

- **NEW in Ares 3.1:** Reports will move to SQL Server Reporting Services, which will allow more custom reports to be created.

Allows instant access to usage statistics. Instructors can access statistics on the website, eliminating the need for library staff to produce reports. Faculty can quickly see what materials are being used by students and evaluate whether to continue putting the same material on reserve.

Reduces reliance on email communication. Faculty can post almost any type of electronic file format allowed by reserves staff so all reserves can be handled in one place. Communication between faculty and library staff takes place within Ares, where everything is tracked.

- **NEW in Ares 3.1:** Staff are notified when instructors change certain information on an item (e.g., loan period, other restrictions) so the information can be updated.

Integrates with external e-learning systems such as Blackboard and Moodle. One login and interface simplifies access to course reserve information. Ease of use encourages faculty to go in and check the accuracy and status of their reserves regularly. The ability to clone classes reduces the amount of time it takes for faculty to prepare for classes each term.

- **NEW in Ares 3.1:** Instructors can customize the order of items within their class (versus only listing alphabetically) while still allowing students to view in that order or in another order like title or author. In addition, staff can connect to the Ares web as a particular instructor to mimic actions of that instructor.
